## Grade 304 Stainless Steel Square-Drive Decking Screws | Retail

These screws have been purpose-made for use with 19 and 21mm hardwood decking.

Prices exclude VAT and delivery

Screw size:

5 x 50mm

5 x 60mm

5 x 75mm

#2 Sq. drive bit

Unit price:

R 0.55

TBA

TBA

R 7.00

Packaging:

Sold in boxes of 200pcs

Sold in boxes of 200pcs

Sold in boxes of 150pcs

Sold individually

Properties:

Material: 304 Stainless Steel.

Square-drive ensures optimum driving power without slippage.

20mm un-threaded shank helps to pull decking plank down tightly onto the joist without the thread having to "strip" in the decking plank, as is the case with full thread screws.

Optimised head diameter improves aesthetic appeal without compromising secure fastening ability.

The thread is cut for wood, not chipboard as is commonly used, therefore providing a better grip in the joist.

Under test conditions these screws were driven to breaking point into a solid piece of Balau, USING A GEDORE POWERBAR AS A LEVER. This required a substantially greater force than the screws should ever experience during normal use. When the screws tested did eventually break, they all broke between the shank and the thread instead of just below the head. In the rare event of a breakage occurring, this allows you to insert another screw alongside without drilling a second hole in the decking plank, thus ensuring a result that looks professional and consistent.
